Drip Tape Or Drip Line

The common kinds of drip irrigation tape/ line are: drip tape with flat dripper, drip line with cylindrical dripper and drip tape with continuous labyrinth.

Drip irrigation tape can not only save water resources, save time and labor, but also achieve the purpose of high yield and income. It is a good thing to do more with one stone. The core part of drip irrigation system is drip irrigation line pipe equipment, and its laying and installation quality directly determines the operation of drip irrigation system. Therefore, the water drip line must be laid according to the construction requirements and steps to ensure the installation quality of drip irrigation tape.

Drip Tape with Continuous Labyrinth

Drip Tape With Flat Dripper

Crop growth needs enough water. Drip irrigation, as a commonly used irrigation method in arid areas, is to use drip irrigation tapes to send water to crop roots for local irrigation through holes or drippers on a 10 mm diameter capillary, which effectively improves the utilization rate of water. Through the combination of fertilization, the fertilizer efficiency can be improved.

SUZHOU SEAPEAK CO., LTD.

Drip irrigation cycle is short, small water frequent irrigation at the same time, effectively reduce the working pressure, realize automatic management. As a micro irrigation method, drip irrigation can slowly and evenly let water seep into the soil, which can play a role in maintaining soil structure. Drip irrigation and drip irrigation tape have a huge impact on crops and form a suitable soil water, fertilizer and thermal environment.

FAQs of Drip Tape Or Drip Line

Q: What is the best drip line tape?

Most of the drip tapes sold are in 5/8". If you buy drip tapes for gardens or small farms with a length equal to or less than 600 feet, we strongly recommend using 5/8" drip tapes. The larger size is only used for large-scale agricultural operations.

Q: How long does drip tape last?

As long as the filter and regulator work properly, the drip tape can usually be used for 3-5 years.

Q: Can drip tape be buried?

Drip irrigation tape can be installed on the ground, covered or buried with mulch (commonly referred to as underground irrigation). It is usually very useful to cover the tape with a few inches of soil or covering.
